ADW300 Wireless Metering Meter

Installation and Use Manual V1.6

Acrel Electric Co., Ltd.

Declaration

Acrel reserves the right to modify the product specifications herein without notification. Please consult the local agent about the latest specifications before placing a purchase order.

Contents

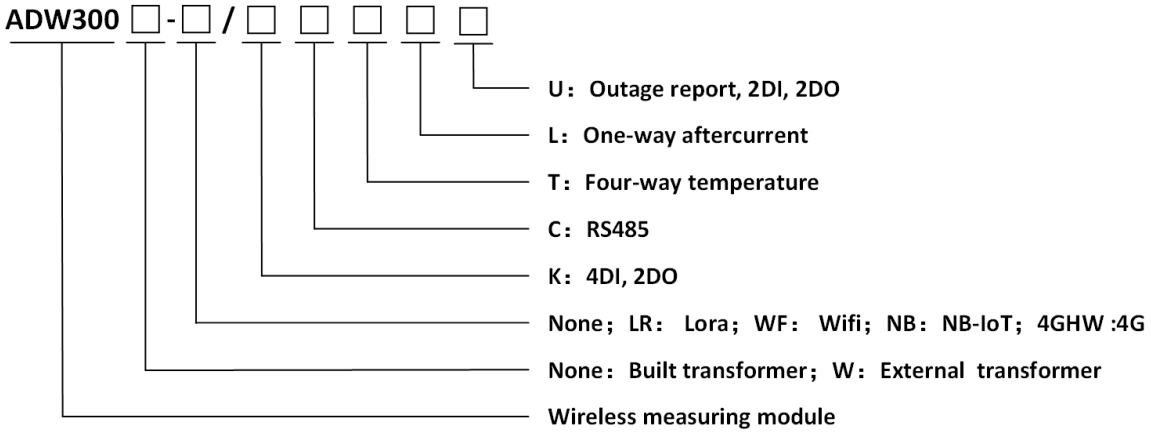
1 Overview

ADW300 Wireless Metering Meter is mainly used to metering three phase active energy on low voltage network. The product boasts of advantages including compact size, high precision, rich features. According to different requirements, there are many communications functions like RS485 communication,lora&LoraWAN,NB,4G,WIFI adding the new current sampling mode using external transformer. It can be flexibly installed in the distribution box to achieve sub-item electric energy metering, operation and maintenance supervision or power monitoring requirements for different regions and different loads.

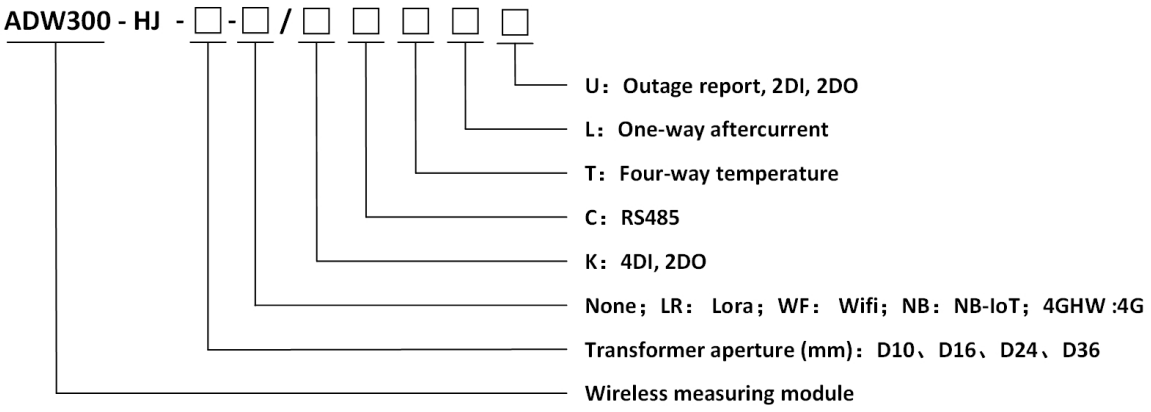
2 Product model and specification

2.1 Naming Rules

2.1.1 ADW300 Wireless Metering Meter



2.1.2 Adw300-hj wireless meter naming rules



2.2 Functional Characteristics

Chart 1 Functions of ADW300

Functions	Description
Display mode	LCD
Energy metering	Active kWh (positive and negative)，quadrant reactive power energy
Electrical measurement	U、I、 P、Q、S、PF、F
Harmonic function	THDv、Harmonic on 2nd-31st
Phase Sequence Diagnosis	It supports wiring diagnosis, remote phase sequence correction, and current polarity adjustment.
Pulse output	Active pulse output
Three-phase unbalance degree	Voltage unbalance,current unbalance
Temperature measurement	Temperature of A/B/C/N（Alternate configuration:T）
DI/DO	4DI,2DO（Alternate configuration:K）
Aftercurrent	One-way aftercurrent（Alternate configuration:L）
LED display	Pulse LED display
External current transformer	External open type current transformer （Alternate configuration:W）
Electrical parameter	Undervoltage, undercurrent, overcurrent, underload, etc
Communication	Infrared communication
	RS485（Alternate configuration:C）
	Wireless transmission on 470MHz （Alternate configuration:LR）
	GPRS（Alternate configuration:2G）
	NB-IOT（Alternate configuration:NB）
	4G（Alternate configuration:4GHW）
	LoraWAN wireless transmission (LW915(AU915), LW868(EU868), LW470 options).
	WIFI（Alternate configuration:WF）

3 Technical parameter

3.1 Electrical performance

Chart 2 Electrical performance of ADW300

Voltage input	Rated voltage		3×57.7/100V，3×220/380V，3×380/660V，3×100V, 3×380V，3×660V
	Reference frequency		50Hz
	Consumption		<0.5VA (Each phase)
Current input	Input current	GB/T 17215.321-2021	ADW300：0.01-0.05(6)A、200mV、333mV ADW300W：0.01-0.05(6)A、0.2-1(100)A ADW300-HJ：（0.01-0.05(6)A（D10）、0.2-1(100)A（D16）、0.8-4(400)A（D24）、1.2-6(600)A（D36））
		GB/T 17215.321-2008	ADW300：3×1(6)A、200mV、333mV ADW300W：3×1(6)A、3×20(100)A ADW300-HJ：（3×1.5(6)A（D10）、3×20(100)A（D16）、3×80(400)A（D24）、 3×120(600)A（D36））
	Consumption		<1VA (Each phase)
Auxiliary power	Power Supply		AC 85~465V ，DC12V，DC24V
	Power consumption		<2W
Measurement performance	Standard		IEC 62053-22:2003，IEC 62053-21:2003
	Active energy accuracy		Class 0.5S（ADW300），Class 1（ADW300W）
	Temperature accuracy		±2℃
Pulse	Width of pulse		80±20ms
	Pulse constant		6400imp/kWh , 400imp/kWh -HJ（6400imp/kWh（D10） 、400imp/kWh（D16）、100imp/kWh（D24）、60imp/kWh（D36））
Communication	Wireless		Transmission on 470MHz and maximum distance in open space is 1km; 2G；NB；4G; WIFI；LoraWAN
	Infrared communication		The constant baud rate is 1200
	Interface		RS485(A、B)
	Connection mode		Shielded twisted pair conductors
	Protocol		MODBUS-RTU

3.2 Work environment

Chart 3 Work environment

Temperature range	Operating temperature	-20℃~60℃
	Storage temperature	-40℃~70℃
Humidity		≤95% (No condensation)

3.3 LoraWAN Parameters

Chart 4 LoRaWAN Corresponding Frequency Band Table

Model	Standard	Frequency Band
LW915	AU915	AU915 - 928
LW868	EU868	EU863 - 870
AS923	AS923	
CN470	CN470	470 - 510

4 Dimension and installing description

4.1 Dimension (Unit: mm)

（1） Dimensions of ADW300

Chart 4 Dimension of Residual Current transformer

Specifications	Current Rating	Inside diameters Φ mm	Outside diameters Φ mm	Weight
AKH-0.66L45	16～100A	45	76	0.18
AKH-0.66L80	100～250A	80	120	0.42
AKH-0.66L100	250～400A	100	140	0.50
AKH-0.66L150	400～800A	150	190	1.32
AKH-0.66L200	800～1500A	200	240	1.94

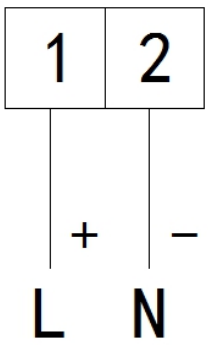
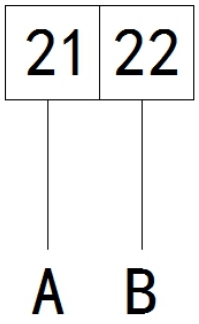
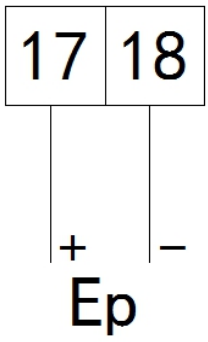
4.2 Interfaces of Auxiliary power supply, Communication and Pulse



Auxiliary power supply Interface



Communication Interface

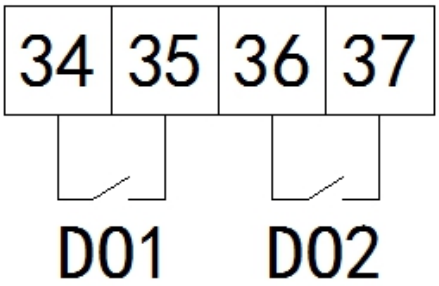


Pulse Interface

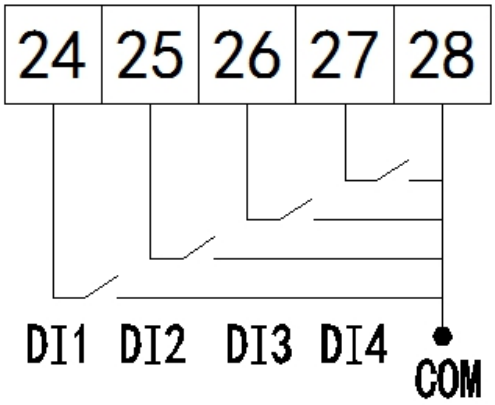
4.3 Interfaces of DI and DO

The digital output is realized by relay for remote control and alarm output.

The digital input is realized by digital signal input. The meter has a built-in +12V working power supply so that it does not require external power supply. The meter collects the external break-make information with digital input module and displays it locally. The digital input not only collects and displays the local break-time information but also provides the remote transmission, i.e. remote communication, with RS485.

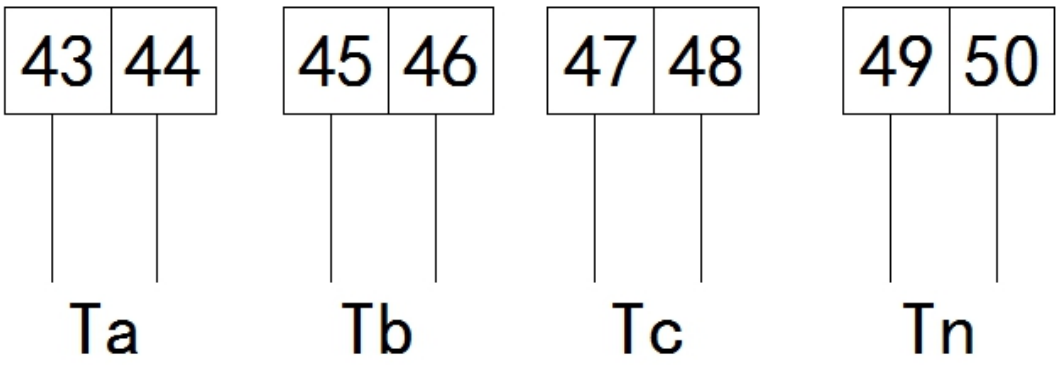


Digital output

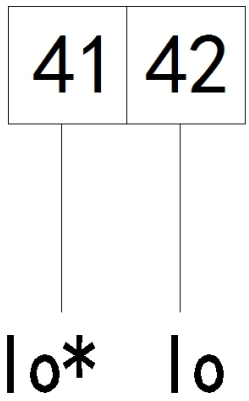


Digital input

4.4 Interfaces of Temperature and Aftercurrent



Temperature input



Aftercurrent input

4.5 Instruction of wiring

There are four modes of connection like 3-phase 4-wire (current connected via CT), 3-phase 3-wire (current connected via CT), 3-phase 4-wire (current connected via PT and CT) and 3-phase -wire (current connected via PT and CT).

Remark:

1. The ADW300W external transformer has two red and white wires, red connected to instrument IA*, IB*, IC*, white connected to instrument IA, IB, IC; The ADW300-HJ external transformer has two red and black wires, red connected to instrument IA*, IB*, IC*, and black connected to instrument IA, IB, IC;

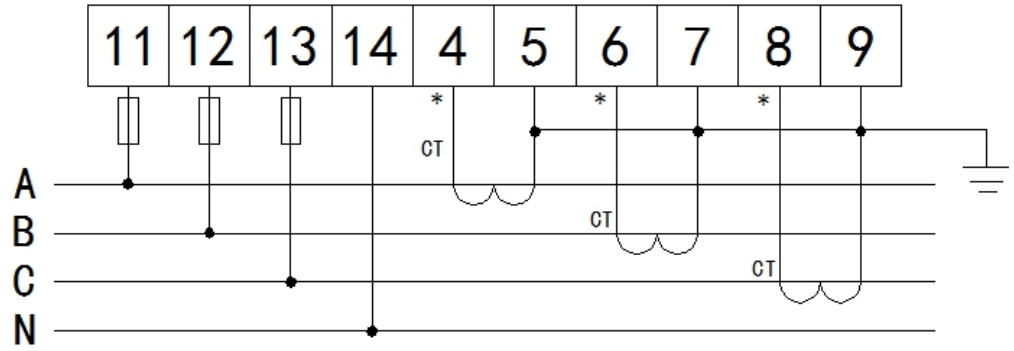
2. Transformers of ADW300W and ADW300-HJ are with mA output, 5A or 1A output transformer is not allowed connected to the energy meters, otherwise energy meters will be damaged;

3. Neither Short-circuit nor ground connection to energy meters ADW300W (ADW300-HJ) is allowed, otherwise energy meters will be inaccurate or even damaged;

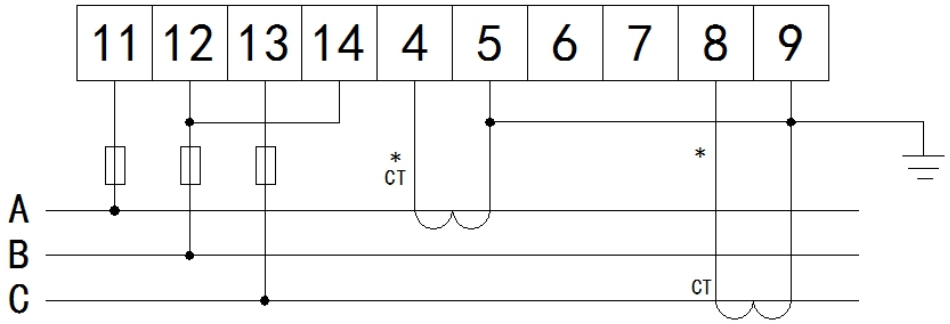
4.When incoming current through the existing transformer output, the existing transformer needs to be kept away from the transformer belonging to ADW300W or

ADW300-HJ (>30cm) so as to avoid interference.

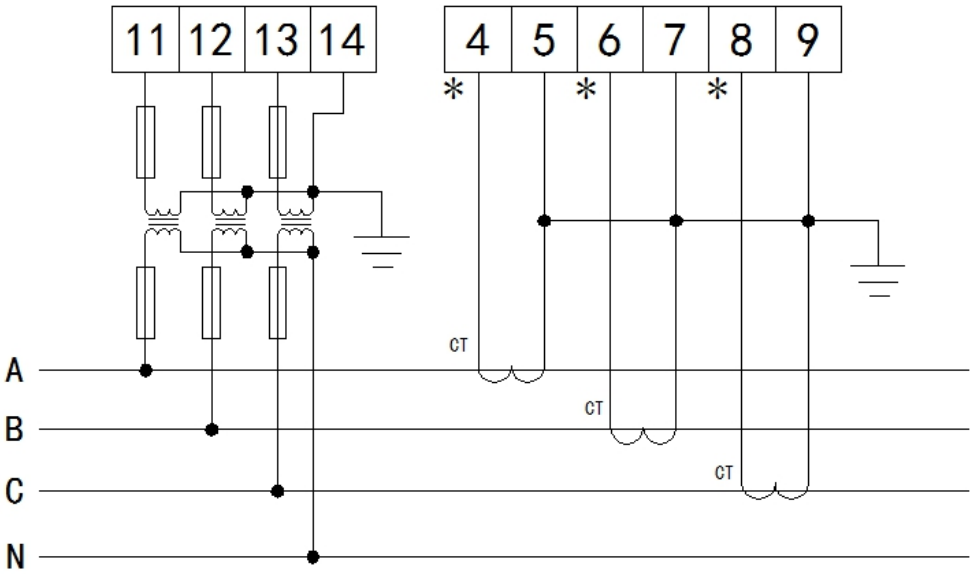
4.5.1 ADW300



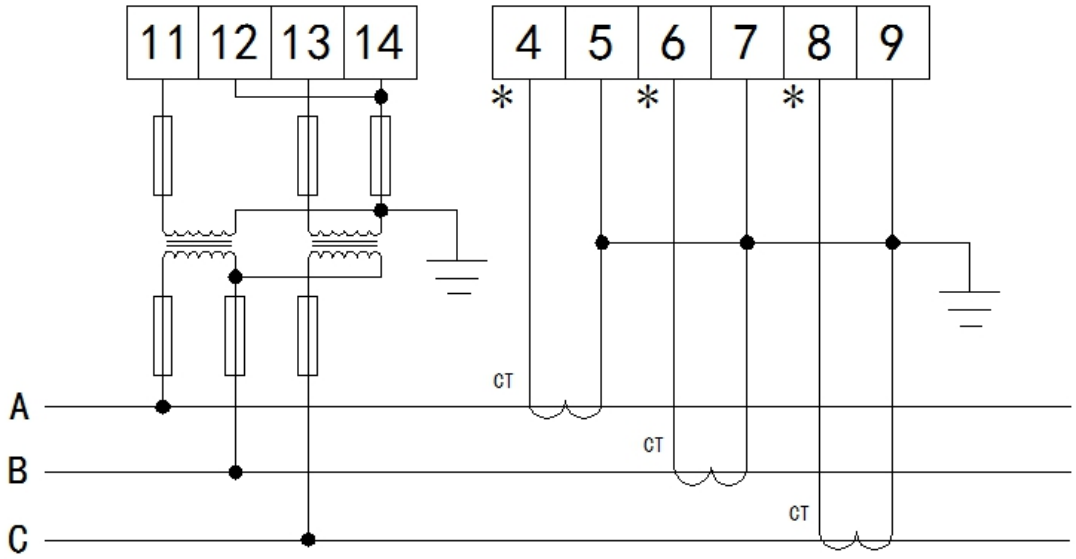
3-phase 4-wire (current connected via CT)



3-phase 3-wire (current connected via CT)

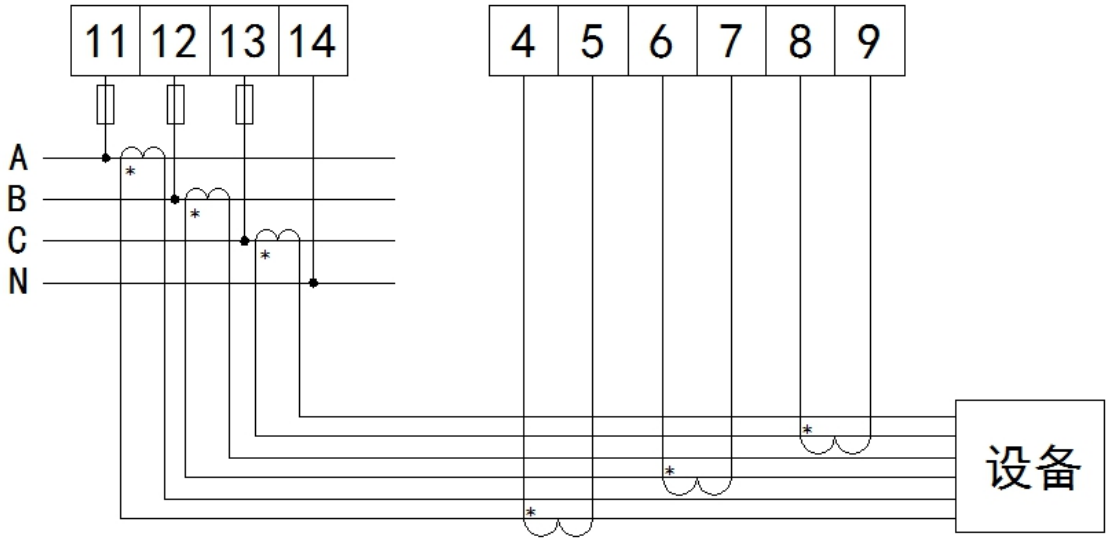


3-phase 4-wire (current connected via PT and CT)

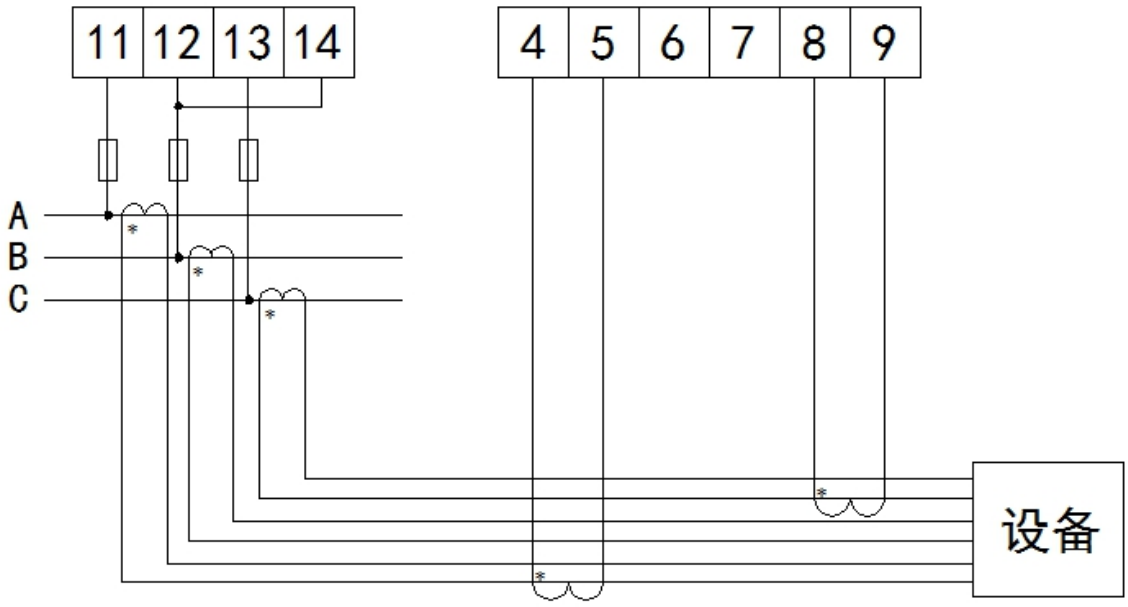


3-phase 3-wire (current connected via PT and CT)

4.5.2 ADW300W



3-phase 4-wire



3-phase 3-wire

5 Main functions and features

5.1 Measurement

Measure all electrical parameters, including voltage U, current I, active power P, reactive power Q, apparent power S, power factor PF, Voltage imbalance, Current imbalance, frequency, 31st harmonic content and total harmonic content . The measured voltage U keeps one decimal place, the measured frequency F keeps two decimal places, the measured current I keeps three decimal places and the measured power P keeps four decimal places. Voltage imbalance and Current imbalance keeps four decimal places.

Example: U = 220.1V, f = 49.98HZ, I = 1.999A, P = 0.2199KW, △=0.00%

Supporting 4-way temperature measurement，range：-40～99℃，accuracy：±2℃

Supporting aftercurrent measurement，The initial range：0～1000mA，Range multiples can be set（1～60）

5.2 Metering

It can measure the current combined active power, positive active power, reverse active power, inductive reactive power, capacitive reactive power, as seen in the electric power.

5.3 Tiered pricing

There are 8 sets of time - of - use tables. A year can be divided into 14 time zones, and each set of time - of - use table can be set with 14 daily time periods and 8 tariffs (F1, F2, F3, F4, F5 represent peak, sharp - peak, flat, valley and deep - valley respectively, while F6, F7 and F8 are reserved). The basic concept of time - of - use billing is to regard electricity as a commodity and use economic levers. The electricity price is high during peak hours and low during off - peak hours, so as to cut the peak and fill the valley, improve the quality of electricity consumption and enhance the comprehensive economic benefits.

5.4 Demand

Demand-related concepts are listed as follows:

Demand	Average power measured during the demand period
Max. demand	Maximum amount of demand during a specified period of time
Sliding window time	A recurrence method to measure the demand from any time point during a period shorter than the demand period. The demand measured by this means is called sliding demand. The recurrence time is sliding window time.
Demand period	Time interval when the same average power is measured continuously, also known as window time

Measure eight maximum demands, i.e. A/B/C three-phase current ,positive active, negative active, inductive reactive , capacitive reactive and apparent power demands and the time of maximum demand.

5.5 Historical data

Record the historical data on electricity consumption covering previous 12 months (including four quadrant and multi-rate tariff).

5.6 Digital input/ output

There are two-way Digital output and four-way Digital input. The Digital output is realized by relay for remote control and alarm output. The Digital input not only collects and displays the local break-time information but also provides the remote transmission, i.e. remote communication, with RS485.

5.7 Wireless Communication Function

ADW300 supports RS485 communication, Lora & LoraWAN communication, NB, 4G and Wifi communication. Among them, 4G, NB and WIFI can access multiple network protocols such as MQTT protocol, HTTP protocol and TCP/IP transparent transmission.

For specific protocols, please contact our relevant personnel. The 4G and Wifi

wireless communication support the power outage reporting function (U option).

The 4G communication supports remote debugging, and parameters such as tariff time - period information, voltage and current transformation ratios, server IP address and port, and upload time can be configured.

The 4G communication supports breakpoint resume. With an upload frequency of every 15 minutes, data can be continuously transmitted for no less than two weeks.

Note: Most of the above functions are optional and need to be communicated in advance.

6 Communication description

6.1 Protocol

The meters adapt Modbus protocol. Please refer to the relevant standards for more information.

6.2 MODBUS

MODBUS-RTU protocol has 03H and 10H command to read and write registers respectively. The following chart is registers' address list:

Start Address（Hexadecimal）	Start Address（Decimal）	Variable	Length	R/W	Notes
0000H	0	Address	2	R/W	1～247
0001H	1	Baud rate	2	R/W	1：1200bps 2：3400bps 3：4800bps 4：9600bps
0002H	2	Spreading factor	2	R/W	6~12
0003H	3	Frequency channel setting	2	R/W	0-45 (Communication with the same frequency host)
0004H	4	High byte: parity mode, low byte: stop Bit	2	R/W	High byte: 0-none, 1-even, 2-odd; low byte: 0- 1 stop Bit, 1-2 stop Bit
0005H	5		2	R/W	High byte：1- New tariff、0- Old tariff low byte:1-Chinese、0-English
0006H	6	Reserved			
0007H	7	Backlight Time			
0008H	8	Code			
0009H~000CH	9-13	Reserved			
000EH	14	PT			

000FH	15	CT			
0010H	16	Temperature of N phase	2	R	Int16 unit 0.1℃ If the reading value is 105, the temperature is 10.5℃
0011H~0013H	17-19	Time, date (second, minute, hour, day, month, year)			
0014H	20	Voltage of A phase	2	R	Uint16 1 decimal places (The real value is the showed value divide 10.The following data all in this rule.)
0015H	21	Voltage of B phase	2	R	
0016H	22	Voltage of C phase	2	R	
0017H	23	Voltage between A-B	2	R

6.4 Historical Data Memory

Start address (high byte)	Data type
48-53H	Last 1 month-last 12 months

Start address (low byte)	Data type
00H	Record date and time
03H	History total active energy
05H	History total forward active energy
07H	History total reversing active energy
09H	History total forward reactive energy
0BH	History total reversing reactive energy
0DH	Total active energy on A phase
0FH	Total forward active energy on A phase
11H	Total reversing active energy on A phase

13H	Total forward reactive energy on A phase
15H	Total reversing reactive energy on A phase
17H	Total active energy on B phase
19H	Total forward active energy on B phase
1BH	Total reversing active energy on B phase
1DH	Total forward reactive energy on B phase
1FH	Total reversing reactive energy on B phase
21H	Total active energy on C phase
23H	Total forward active energy on C phase
25H	Total reversing active energy on C phase
27H	Total forward reactive energy on C phase
29H	Total reversing reactive energy on C phase
2BH	Current spike electric energy
2DH	Current peak electric energy
2FH	Current flat electric energy
31H	Current valley electric energy
33H	Current forward active spike electric energy
35H	Current forward active peak electric energy
37H	Current forward active flat electric energy
39H	Current forward active valley electric energy
3BH	Current reversing active spike electric energy
3DH	Current reversing Active peak electric energy
3FH	Current reversing active flat electric energy
41H	Current reversing Active valley electric energy
43H	Current forward reactive spike electric energy
45H	Current forward reactive spike electric energy
47H	Current forward reactive flat electric energy
49H	Current forward reactive valley electric energy
4BH	Current reversing reactive spike electric energy
4DH	Current reversing reactive peak electric energy
4FH	Current reversing reactive flat electric energy
51H	Current reversing reactive valley electric energy

6.5 Record of extreme value and occurrence time

1） Maximum records：

Starting address of interval (high byte)	Type of historical data
04	Extremum of the month and Occurrence time
05	Extremum of last 1 month and Occurrence time
06	Extremum of last 2 month and Occurrence time
07	Extremum of last 3 month and Occurrence time

Offset address of interval (low byte)）	Data type
00	Voltage of A phase maximum value and occurrence time
03	Voltage of B phase maximum value and occurrence time
06	Voltage of C phase maximum value and occurrence time
09	Voltage between A-B maximum value and occurrence time
0C	Voltage between A-B maximum value and occurrence time
0F	Voltage between A-B maximum value and occurrence time
12	Electricity of A phase maximum value and occurrence time
15	Electricity of B phase maximum value and occurrence time
18	Electricity of C phase maximum value and occurrence time
1B	Three phase current vector sum maximum value and occurrence time
1E	Active power of A phase maximum value and occurrence time
22	Active power of B phase maximum value and occurrence time
26	Active power of C phase maximum value and occurrence time
2A	Total active power maximum value and occurrence time
2E	Reactive power of A phase maximum value and occurrence time
32	Reactive power of B phase maximum value and occurrence time
36	Reactive power of C phase maximum value and occurrence time
3A	Total reactive power maximum value

	and occurrence time
3E	Apparent power of A phase maximum value and occurrence time
42	Apparent power of B phase maximum value and occurrence time
46	Apparent power of C phase maximum value and occurrence time
4A	Total apparent power maximum value and occurrence time

2） **Minimum record:**

Starting address of interval (high byte)	Type of historical data
04	Extremum of the month and Occurrence time
05	Extremum of last 1 month and Occurrence time
06	Extremum of last 2 month and Occurrence time
07	Extremum of last 3 month and Occurrence time

Offset address of interval (low byte)）	Data type
4E	Voltage of A phase Minimum Value and occurrence time
51	Voltage of B phase Minimum Value and occurrence time
54	Voltage of C phase Minimum Value and occurrence time
57	Voltage between A-B Minimum Value and occurrence time
5A	Voltage between B-C Minimum value and occurrence time
5D	Voltage between C-A Minimum value and occurrence time
60	Electricity of A phase Minimum value and occurrence time
63	Electricity of B phase Minimum value and occurrence time
66	Electricity of C phase Minimum value and occurrence time
69	Three phase current vector sum Minimum value and occurrence time
6C	Active power of A phase Minimum value and occurrence time
70	Active power of B phase Minimum value and occurrence time
74	Active power of C phase Minimum value and occurrence time

78	Total active power Minimum value and occurrence time
7C	Reactive power of A phase Minimum value and occurrence time
80	Reactive power of B phase Minimum value and occurrence time
84	Reactive power of C phase Minimum value and occurrence time
88	Total reactive power Minimum value and occurrence time
8C	Apparent power of A phase Minimum value and occurrence time
90	Apparent power of B phase Minimum value and occurrence time
94	Apparent power of C phase Minimum value and occurrence time
98	Total apparent power Minimum value and occurrence time

Note：The record of every extreme value and occurrence time is 6 bits, and the data configuration can be refered as below:

ADDRH ADDRL	Event names	Data type	Note
0400H	Maximum voltage of A phase and occurrence time	The data of Maximum voltage of A phase	data and decimal place refer to address table 6.2
0401H		Occurrence time of minutes and hours	high byte : minutes
0402H		Occurrence time of Days and months	high byte : Days

7 Common troubleshooting

7.1 RS485 networking communication failure

Suggestion: Please first confirm whether the RS485 wiring is loose, AB connection reverse and other problems, and then check the table through the button to see if the general selection parameters, such as address, baud rate, check digit, etc., are set correctly.

7.2 Wireless communication failure of instrumentation

Suggestion: Please connect RS485 interface on the meter and USB convert to 485 serial port to read the parameters, and confirm whether the parameters are the same as the upper

terminal wireless configuration (channel and spread spectrum factor). If different, please modify the meter's wireless parameters and retest the master terminal after the same, and if the same, it may be the meter and master terminal are in a relative long distance. It is too far to communicate or the scene is seriously disturbed. We can try to use the external antenna at the same time, or consider the newly added wireless master terminals, and then test it.
